

Temperature and humidity display

IONA MASTER

IONA MASTER is an acquisition and display system for measuring ambient temperature and humidity manufactured by **Disenos y Tecnologia**.

The reading is visible at more than 50 m with a large choice of colors for the digits of the Temperature and Humidity displays.

IONA MASTER can be supplied with three screen sizes: 24", 32" and 40". For larger sizes, consult DITEL.

IONA MASTER, unlike the other existing models, **includes a multitude of interconnection possibilities**. This model includes by default the option of data logger, the possibility of consulting data from the data logger via SQL protocol, and thus allows interconnection via a Web server with Json responses. IONA MASTER offers the possibility of customizing the company logo, as well as incorporating multimedia content such as announcements or advertisements in graphic format.

IONA MASTER has an Ethernet connection to be able to share data with any web browser as well as with IONA SLAVE devices, which will be able to read and capture data from the IONA MASTER and therefore display them in any other place or room.
