# Temperature and humidity display
IONA SLAVE

IONA SLAVE manufactured by Disenos y Tecnologia is a remote display system for displaying the ambient **temperature and humidity** measurement received from an IONA MASTER via Ethernet communication.

The reading is visible at more than 50 m with a large choice of colors for the digits of the Temperature and Humidity displays. IONA SLAVE can be supplied with three screen sizes: 24", 32" and 40". For larger sizes, consult DITEL.

IONA SLAVE requires prior installation of an IONA MASTER from which temperature and humidity data will be captured. Therefore, IONA SLAVE does not include a temperature and humidity sensor, but its function is to display the data that the IONA MASTER supplies to it. This type of application is very useful for rooms or spaces where several screens are necessary but with a single temperature and humidity measurement. IONA SLAVE also allows customization of the logo, as well as the incorporation of multimedia content or advertisements in graphic format independently of those that IONA MASTER displays at the same time.
